

# Press Release

## REYGAR – ACTISENSE PARTNERSHIP:

### BAREFLEET FLEET MONITORING SYSTEM ENHANCED

Marine innovation company Reygar has partnered with Actisense, an established manufacturer of specialist marine electronics, to enhance the capability of Reygar's BareFLEET remote fleet monitoring system.

Reygar recently won a European Commercial Marine Innovation award for BareFLEET. This recognised the comprehensive measurement capabilities of this fleet monitoring system, as well as the simple and concise way vessel performance, health, motion and fuel efficiency information is reported back to fleet operators. This helps them reduce fleet operating costs and evidence savings and vessel activity to their customers.

Actisense offer a range of specialist marine electronic products allowing vessel navigational and engine data to be gathered and converted between different protocols. Actisense equipment can be fully integrated into BareFLEET to allow data to be gathered from a wide range of older marine diesel engines, as well to maximise data capture from existing instrumentation on the vessel such as hull speed sensors, wind anemometers, gyros and DGPS's.

Chris Huxley-Reynard, Managing Director of Reygar said "Combining the highly innovative reporting features of BareFLEET with the versatility and dependability of Actisense's electronics further broadens the capabilities of BareFLEET whilst still keeping the system affordable for small and large commercial marine operators".

Danny Thrasher, Head of Sales & Operations at Actisense said “We are pleased to be partnering with Reygar to enhance their award-winning remote fleet monitoring system. There is a great synergy between our products and BareFLEET which are both designed to maximise effectiveness and make life easier onboard vessels.”

**Notes to editors**

Reygar provides fully integrated control and monitoring systems to the marine industry. These include remote monitoring and fleet reporting systems, all based on the central tenets of simplicity and ruggedness.

Actisense provides intelligent sensors and interfaces to the marine industry that are unrivalled for quality, functionality and reliability.
